GitHub Copilot

The Rise of AI Coding Assistants

Daniel Lubimov · Marcus Ghods · Trevelle Pain-Wilson

CEP146 · Essential Tooling for Programmers
Project: Software Development Current Event

Benefits of AI coding assistants

- Saving time with repetitive code
- Suggesting changes through pull requests
- Suggesting fixes and creating tests
- Explaining code and programming concepts

GitHub Copilot Coding Agent

May 19, 2025

- Take on assigned tasks
- Introduce changes to a project
- Create pull requests for developers to review
- A real developer still needs to check its work.

Problems and risks

Code that looks correct but doesn't work

Security problems and inaccurate explanations

Relying too much on AI instead of learning

Read, understand, and test AI-generated code.

What developers think about AI

84%

Use AI tools or plan to use them in the future

46%

Distrust the accuracy of AI-generated results

Many developers are interested in AI, but still have concerns about reliability.

The developer is still responsible

AI is a helpful tool, but the person using it is still responsible for the final result.

Understand what the code does.
Make sure it works correctly.
